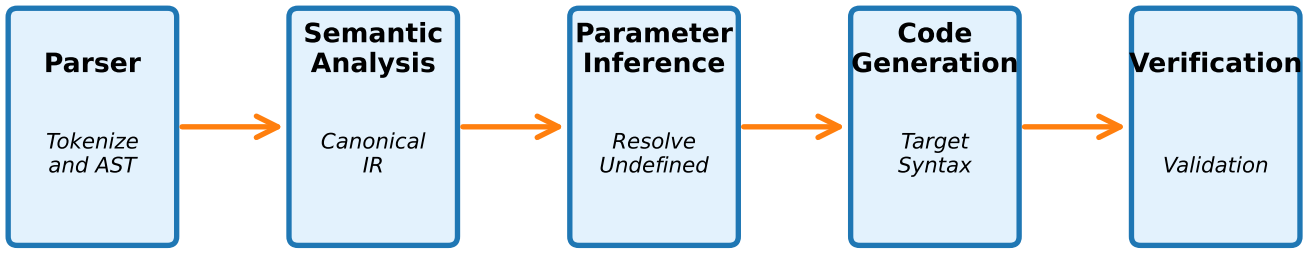
SpiceModelIR: Five-Phase Translation Pipeline



Input:

```
.model N1 NMOS
(vth={tox_default})
```

Output:

```
.model N1 NMOS
(vth=0.35)
```

Parameter Inference Decision Tree:

```
If token matches "tox*" → oxide baseline
    Else if "u0*" → mobility baseline
Else if "*delta*" → set to 0.0 (typical corner)
```

Verification:

DC, AC, transient
Monte Carlo, round-trip
BSIM envelope check
